

INSTALLATION

Other cameras: Require an expensive and extensive infrastructure that can take months to plan out and implement. Then they are stuck where they are installed.

TSUNAMI: Plug & play installation allows for the camera to start working in minutes. The TSUNAMI can be moved after initial installation with nothing more than a drill. Because you can access the video with 4G data service, we don't need to run wires to each unit. All you need is a pole and a 110 volt power supply.

RESOLUTION

Other Cameras: Many cameras stream in 720p as their highest quality. How many times have you seen a blurry video of a criminal who couldn't be identified? The reason that camera systems have to keep their resolution low is because there is no on-board storage and they must stream to the cloud/server in order to record.

TSUNAMI: records in 3000p. We store locally, which means we ONLY use the 4G when viewing or extracting the video – which means our resolution can stay EXCEPTIONALLY higher.

4 Cameras record 360° video in ULTRA-high definition 24/7. Each TSUNAMI unit has 8 terabytes of internal storage, which can hold up to 20+ days of uninterrupted video. Each TSUNAMI comes with exceptional infrared night vision and, for extra detail, there's the Monsoon: an ultra long-distance pan-tilt-zoom camera.

PRICE

Other cameras: Become outdated/obsolete and start breaking 2 years after you purchase them... right about the time the warranty expires.

TSUNAMI: The TSUNAMI is a leased product and that yearly price covers it all. Every unit comes with training and IT support for the designated "super user", a warranty for the entire life of the lease, insurance, maintenance support (all parts are hot swap/quick detach, so if something breaks, replacement is easy), AND at the end of every 4 years we replace your TSUNAMI with a brand new, updated version at no additional cost. No more outdated cameras that don't even work.
